

Scribe

Bringing Full Order Actions to Draft Orders

The Problem Today

In BigCommerce, when your team works with regular orders, they have access to a full set of actions:

- Edit Order
- Print Invoice
- Print Packing Slip
- Resend Invoice
- Send Message
- View Notes
- Refund
- View Order Timeline

However, when working with Draft Orders, the available actions are limited to just:

- Edit
- Delete

This means your team cannot print, send, message customers, or view notes on draft orders, forcing manual workarounds and slowing down day-to-day operations.

Can This Be Fixed?

Yes, and without modifying BigCommerce itself.

BigCommerce provides an official extension system that allows approved apps to add new action options directly into the admin panel. When your team clicks the action menu ("...") on any draft order, they will see a new "Scribe Actions" option alongside the existing Edit and Delete.

Clicking it opens a side panel, right there on the same page, no navigation required, with all the actions your team needs:

Action	What It Does
Print	Generate and download a branded PDF of the draft order, ready to print or share
Send	Email the draft order to the customer with a link to complete their purchase
Message	Send a direct message to the customer about their draft order

Notes	View and add internal staff notes, keeps your team aligned
Edit	Jump straight to BigCommerce's native draft order editor

All of this works within the BigCommerce admin - no separate app to switch to, no extra tabs, no new login.

How It Looks

Current Draft Order Actions		With Scribe	
+-----+		+-----+	
- Edit		- Edit	
- Delete		- Delete	
	->	- Scribe Actions	< Opens side panel
		Print	
		Send	
		Message	
		Notes	
		Edit	
+-----+		+-----+	

The side panel slides in from the right - your team stays on the Draft Orders page the whole time.

What About Regular Orders?

Scribe Actions will appear on regular orders too. This means your team gets a unified experience - the same panel, the same actions, the same workflow - whether they're working with a draft order or a completed order. The panel automatically detects the order type and shows the relevant options.

What We Need From You

1. BigCommerce sandbox/dev store - for building and testing (confirmed ready)
2. API credentials - OAuth app credentials with Orders access
3. Branding assets - logo and color preferences for PDF templates
4. Email preferences - preferred sender address and any email branding requirements

Frequently Asked Questions

Q: Does this require BigCommerce to make any changes on their end?

No. This uses BigCommerce's official App Extensions system, the standard supported way to add functionality to the admin panel. No special permissions or BigCommerce involvement needed.

Q: Will this break if BigCommerce updates their admin?

The App Extensions system is BigCommerce's official extensibility path. It is designed to survive admin updates. We also use BigCommerce's own design components so the look and feel stays consistent.

Q: Is customer data safe?

Yes. All data stays within your BigCommerce store and our secure backend. We use encrypted connections, scoped API access (only what's needed), and full audit logging of every action taken.

Q: Can this work across multiple storefronts?

Yes. Scribe is built with multi-storefront isolation, each storefront's data, branding, and actions are completely separate.

Q: What happens when a team member clicks "Send"?

The customer receives a professional email with the draft order details and a link to complete their purchase. Your team can customize the email template and sender information.

Summary

Item	Detail
Problem	Draft orders only have Edit and Delete - no print, send, message, or notes
Solution	Scribe adds a "Scribe Actions" panel to the draft order action menu
How	Uses BigCommerce's official App Extensions - no platform modifications
Risk	Low - uses supported, official BigCommerce integration methods
Result	Draft orders get the same rich action set as regular orders
